

Splice Kit

Installation Manual

Compatible with Signaline FT-EN, FT & FT-R
Suitable for EN54 Installations
Cost-effective
Fire Rated connection Box

Fire
detection

Signaline

The Splice Kit is an IP68-rated connector designed to deliver uncompromising reliability in Linear Heat Detection cable installations.

Whether joining a leader cable to a digital linear heat detection or extending runs by linking two lengths, this Splice kit provides a simple solution.

Its compact, non-invasive design accelerates installation, reduces component count, and minimizes on-site disruption. Saving time and cost without sacrificing quality.

Built with a robust watertight seal, the Splice Kit ensures long-term system integrity in the harshest environments, making it the smart choice for demanding industrial applications.

The Splice Kit is particularly useful for installations where a flat surface is not accessible making mounting a traditional junction box difficult. The Splice Kit can connect to runs of linear heat detection or connect leader cable to Linear Heat Detection without need to be secured to a wall or ceiling. Making it the ideal solution for applications such as Solar PV or where Signaline Catenary wire is being used.
